

Amendments to the Claims:

This listing of claims will replace all prior versions and listings of claims in the application.

Listing of Claims:

1. (currently amended) An abrasive article comprising:
a flexible backing; and
a plurality of abrasive features, said features ~~further~~ comprising a polymeric binder and abrasive particles, wherein said abrasive features have a base, a planar top portion opposite said base, said planar top portion including abrasive particles thereon, and the abrasive features having at least three sides, the angle between said base and one of said sides forming a positive rake angle.
2. (currently amended) The abrasive article of claim 1 wherein ~~at one of said abrasive features further includes a~~ the planar top portion ~~that~~ is angled with respect to said base.
3. (canceled)
4. (currently amended) The article of claim 1, wherein the ~~body~~ planar top portion includes a region or point located most distally from the base, and further wherein the region or point projects outside the base perimeter.
5. (currently amended) The abrasive article of claim 4 wherein ~~at least one of said abrasive features further includes a~~ the top planar section ~~that~~ is angled with respect to said base.
6. (withdrawn) A method of making an abrasive article comprising:
providing a tool including a pattern for forming abrasives features;
placing abrasive particles in the tool;
filling the tool with a slurry;
contacting the slurry with a backing; and

curing the slurry to form abrasive features including a top portion bonded to said abrasive particles and a bottom portion bonded to said backing.

7. (withdrawn) The method of claim 6, wherein providing a tool includes providing a tool for forming abrasives features including a planar top.

8. (withdrawn) The method of claim 7, wherein the planar top is angled with respect to a reference plane defined by the backing.

9. (withdrawn) The method of claim 7, wherein the abrasive particles are aluminum oxide.

10. (currently amended) An abrasive article comprising:
a flexible backing; and
a plurality of abrasive features on the backing, each of the abrasive features comprising polymeric binder and abrasive particles, and including a base and a body, wherein the body is defined by four surfaces and a planar surface opposite to and angled in respect to the base, and wherein at least one of the surfaces includes an undercut portion.

11. (canceled)

12. (currently amended) The article of claim ~~[[11]]~~ 10, further including abrasive particles disposed on the planar surface.

13. (canceled)

14. (original) The article of claim 12, wherein the undercut portion includes a radiused section adjacent the base.

15. (original) The article of claim 10, wherein the undercut portion includes a radiused section adjacent the base.

16. (original) The abrasive article of claim 10, wherein the plurality of features are arranged in an array wherein each undercut portion is oriented in the same direction.

17. (currently amended) The abrasive article of claim 16, wherein the array is oriented at a bias on the ~~abrasive article~~ backing.

18. (currently amended) **[[A]]** An abrasive feature for an abrasive article comprising: a base and a body, the body comprising abrasive particles and polymeric binder, the body including four sidewalls, wherein at least one sidewall forms a surface having a positive rake angle.

19. (original) The feature of claim 18, further including a planar top section disposed distally from the base.

20. (original) The feature of claim 19, wherein the planar top section is oriented substantially parallel to the base.

21. (currently amended) The feature of claim 19, wherein the planar top section is oriented at an angle of more than about 2 degrees with respect to the base, and further wherein the planar top section slopes away from the surface having a negative rake angle.

22. (original) The feature of claim 19, further including abrasive particles disposed on the planar top section.

23. (original) The feature of claim 18, wherein the surface includes a radiused portion adjacent the base.

24. (original) The feature of claim 22, wherein the surface includes a radiused portion adjacent the base.
25. (previously presented) A tool for making the abrasive article in claim 1.
26. (currently amended) An abrasive belt for abrading material comprising:
a flexible backing defining a belt shape; and
a plurality of abrasive composites on the backing, each of the abrasive composites comprising polymeric binder and abrasive particles, and including a base and a body, wherein the body is defined by four surfaces and a planar surface opposite to and angled in respect to the base, and wherein at least one of the surfaces includes an undercut portion.
27. (canceled)
28. (currently amended) The belt of claim ~~[[27]]~~ 26, further including abrasive particles disposed on the planar surface.
29. (canceled)
30. (original) The belt of claim 28, wherein the undercut portion includes a radiused section adjacent the base.
31. (original) The belt of claim 26, wherein the undercut portion includes a radiused section adjacent the base.
32. (original) The belt of claim 26, wherein the plurality of composites are arranged in an array wherein each undercut portion is oriented in the same direction.
33. (original) The belt of claim 32, wherein the array is oriented at a bias on the abrasive article.

34. (currently amended) A method of abrading a wooden workpiece, the method comprising:

contacting an abrasive article to the workpiece, wherein the abrasive article includes:

a flexible backing;

a plurality of abrasive composites on the backing, each of the abrasive composites comprising polymeric binder and abrasive particles, and including a base and a body, wherein the body is defined by four surfaces and a planar surface opposite to and angled in respect to the base, and wherein at least one of the surfaces includes an undercut portion, and

wherein a section of the undercut portion engages the workpiece before any other surface of the body.

35. (currently amended) The method of claim 34, wherein said contacting an abrasive article further includes contacting the abrasive article including ~~a planar top section, and wherein~~ abrasive particles are disposed on the top section planar surface.

36. (original) The method of claim 34, wherein said contacting an abrasive article further includes contacting the abrasive article including a radiused portion adjacent the base on the undercut portion.

37. (original) The method of claim 36, further including removing swarf via the radiused portion.

38. (original) The method of claim 34, wherein the backing is a belt.
